

**Scenario:**

You are working for a University, and you have been tasked with finding a new security and identification system for your school. You heard about TG Security and decided to look at their website to find out some more information.

**Tasks:**

1. Find the about section to learn more about what the company is and what they are doing.
2. Find any security system that might work for your school.
3. Look for a replacement camera, in case one breaks in the future, and you can be sure you would be able to replace it.

**3 Things to change/improve about the website:**

- A description should be added in the screens where the user is browsing different products.
- On the home screen, there should be a permanent menu with everything in the side menu.
- Change the about us section to be more prominent.

**3 Things to keep the same:**

- Having a collapsible side menu was good.
- Having reviews was good.
- Having big readable text and pictures.
